Cowpea landrace diversity in the CGIAR collections: Finding and filling the gaps

1 The Cowpea Diversity Tree is a representation of the structure of the cowpea gene pool obtained by dividing it into hierarchical clusters (Van Treuren et al. 2009).

2 Accessions conserved at IITA and ILRI were mapped onto the end-groups in the tree and against crop suitability area on the map (FAO/IIASA 2011).

3 61% of the 41 end-groups in the Cowpea Diversity Tree are well represented in CGIAR collections, but 10% are not represented at all.

4 How does your national collection complement these CGIAR collections?
